SKILLS

React, Redux, Rails, Javascript, Node.js, Express, MongoDB, HTML5, CSS, SQL, AWS, Nginx, Apache, Adobe

EXPERIENCE

Full Stack Software Engineer / CourtBuddy, San Francisco, CA   5/19 - Present
- Collaborated with the design and product teams to build a complete new version of the application using Node.js, React, and MySQL as the company's first on site software engineer.
- Managed multiple EC2 servers and used nginx as a reverse proxy to route a React.js frontend to multiple backends in both Python and Node.js.
- Used apache to allow the new React frontend to connect to the existing PHP infrastructure which enabled the creation of the courthouse, careers, areas of law and landing pages.
- Created patent-pending Case Classifier application that takes the user's input and intelligently classifies the type of case through machine learning.

Contract Video Producer/Editor/Animator / San Jose, CA & New York, NY   6/10 - 8/18
- Collaborated with the conception and creation of Ryan Leslie's "SuperPhone" application, increasing revenue by over 30,000 in the first month of the apps release.
- Achieved over 10,000,000 views producing videos for diverse list of entertainers and companies: Kevin Hart (Comedian), Ryan Leslie (Grammy Nominated Artist), Kevin Fox (3 time Grammy winner), Fabolous (Grammy Nominated Artist), Min (K-Pop), Xilinx, Cisco, Intel, Dell, AeroScout, and Global Foundries

IT Technician / Kaiser Permanente, Santa Clara, CA   4/18 - 7/18
- Utilized effective Apple technician processes, increasing team's efficiency by 300%.
- Supported continuous process improvement by participating in the development, implementation, and maintenance of standardized tools, templates, and processes.

Apple Genius Bar Technician / Apple Inc., New York, NY   11/13 - 5/16
- Maintained a perfect Net Promoter Score of 100 while repairing/troubleshooting Apple hardware and software.
- Taught classes on Apple applications ranging from basic to advanced courses.
- Utilized empathy, patience, and care in defusing potentially aggressive confrontations.

PROJECTS

KumaFlix | *(React/Redux, Rails, Ruby, Javascript, PostgreSQL, AWS)*   **live** | **github**
A single page Fullstack clone of netflix completed in ten days
- Implemented Amazon Web Services (AWS) to allow app to scale and reduce server load.
- Utilized BCrypt hashing function to prevent saving users' plain text passwords to the database.
- Constructed dynamic search component to filter movies index page based on a real time search query.

Jamma | *(React/Redux, Rails 5, MongoDB, Node Express, JWT, Passport, CSS)*   **live** | **github**
A single page web application to display happy hours and relevant information using user's location.
- Used Google's Geocode API to pull the GPS Coordinates from the user's input address to correctly display the happy hour location on the map.
- Promised a more secure application through JWT for user authentication.
- Designed wireframes for each page with Adobe XD to ensure consistent style among team members.

EDUCATION

AppAcademy - 1000-hr immersive full-stack software engineering course   10/18 - 2/19
Santa Clara - *BA Communication with an emphasis in video production*   9/06 - 6/10
